Antennas and Propagation for Wireless Communication ... □ Above 30 MHz neither ground nor sky wave propagation operates □ Transmitting and receiving antennas must be within line of sight

- o Satellite communication – signal above 30 MHz not reflected by ionosphere
- o Ground communication – antennas within effective line of sight due to refraction

□ Refraction – bending of microwaves by the atmosphere Antennas & Propagation One of the key

areas of any radio system is that part where the signal is transferred from the transmitter to the receiver. This involves the use of antennas or aerials to radiate the signal as an electromagnetic wave, and then there is the way that the electromagnetic wave travels or propagates between the transmitting antenna and the receiving one. Thus antennas and propagation are key areas for any radio system.
