This project is about automatic power source selection circuit diagram using Arduino.. I have already posted a article on automatic transfer switch using pic microcontroller.. The basic objective of this project is to select power supply form two different sources. Automatic power source selector circuit using Arduino Power failure is a common problem. It hampers the production of industry, construction work of new plants and buildings. It can be overcome by using a backup power supply such as a generator. But it is cost effective and also time consuming
