system Flashcards | Quizlet Chapter  
13 - The Endocrine System. Section  
13.1 - The Endocrine System &  
Homeostasis. The endocrine system  
is made up of the hormone  
producing glands and tissues of the  
body. Hormones are chemicals  
which circulate through the blood  
and control organs and tissues in  
the body. Organs which are  
affected by a hormone are called  
target organs. Each target organ is  
only affected by a particular  
hormone. Chapter 13 - The

Hormone Summary Table

Endocrine System The endocrine system is also precise, because only target cells can respond to a particular type of hormone. A hormone's target cells have specific receptors that are not on other cells. These receptors are proteins or glycoproteins with binding sites for a specific hormone. Chapter 13 Endocrine system Flashcards | Quizlet the endocrine system produces hormones endocrine system: collection of specialized cells, and tissues that secrete hormones endocrine glands: ductless organs.
