Collaborative Robot Technical Specification Iso TS 15066 supplements ISO 10218 for safe robotic collaboration. The ISO specification is named ISO/TS 15066 and is a supplement to ISO 10218, the 'Safety Requirements for Industrial Robots' standards. When the last revision of the ISO 10218 standards came out back in 2011, they were focused on traditional industrial robots, collaborative robots were still a new technology and not addressed in detail. (Part 1 and Part II), ISO/TS 15066 describes four main techniques for collaborative operation: a) safety rated monitored stop b) hand guiding c) speed and separation monitoring d) power and force limiting. Standardizing Collaborative Robots: What is ISO/TS 15066

... Human and robot system interaction in industrial settings is now possible thanks to a new ISO technical specification for collaborative robot system safety - ISO/TS 15066. Industrial robot systems are usually separated from humans to protect people from injury. However, technology advancements have grown the potential to safely bring robots closer together with humans. This [...] ISO specification for collaborative robot operation -

Energize The work on ISO/TS 15066 started back in 2010 and the published result is the consensus between all stakeholders. ISO/TS 15066 is a Technical Specification that provides supplemental and supporting information to the industrial robot safety standards ISO 10218-1 and ISO 10218-2 published in 2011. New Technical Specification on Collaborative Robot Design The safety standard ISO 10218 and technical specification RIA TS 15066 define the safety functions and performance of the collaborative robot. Under TS 15066, the force and speed monitoring of the cobot is set based on application data, human contact area, and workspace hazards. Human contact is defined in two types: transient and quasi-static. A
