Statistics teaches problem solving using logic and measurement. Once the problem is set up, it uses math, now done online, to answer the question with a very good degree of probability. This explanation is more complicated than statistics. Statistics is very practical because it allows you to make a decision. Is

Statistics - Statistics - Estimation: It is often of interest to learn about the characteristics of a large group of elements such as individuals, households, buildings, products, parts, customers, and so on. All the elements of interest in a particular study form the population. Because of time, cost, and other considerations, data often cannot be collected from every element of the population. Statistics - Estimation | Britannica In probability theory, an event, often denoted by capital

letters such as ω or ω_i , is a set of outcomes of an experiment (i.e., a subset of the sample space) to which a probability is assigned. A single outcome may be an element of many different events, and different events in an experiment are usually not equally likely, since they may include very different groups of outcomes.
