## Factors Affecting Liver Size

Journal In both the univariate and multiple analyses, height was shown to be a significant influence parameter affecting liver size in the MCL ( $P < .001$ ). Liver diameter increases by approximately 0.04 cm/cm of height. Thus, height can be considered a moderately important factor influencing liver diameter in the MCL (Table

). Factors Affecting Liver Size -

growth after pediatric orthotopic liver transplantation (OLT) is a well-described phenomenon. We have undertaken a bivariate and

multivariate analysis of multiple factors that might effect postOLT growth in all children who

underwent transplantation at a single center, with survival > 1 year and adequate follow-up. FACTORS AFFECTING GROWTH AFTER

to determine the size of the human liver allows sonographers and physicians improved ability to diagnose and understand underlying liver pathology and to determine the most effective treatment approach to disease. 1 -4 Accurate liver measurement techniques allow for more effective surgical planning, aiding in liver transplantation and determination of adequate residual liver ... Methods of Determining the Size of the Adult Liver Using ... This study examined the factors affecting the readmission of patients with liver cirrhosis, and focused on self-care, social support, and drinking refusal self-efficacy. The subjects were 75 cirrhosis patients who were admitted to medium-sized hospitals at S-city for

Factors affecting RNA isolation First, we tested different buffers to wash out formalin from liver tissue. We washed the tissue using different concentrations of ethanol (0, 25, 50, 75 and 100%) or TAE (0, 2.5, 5 or 10×) for different time periods (30 min, 6 h, 24 h). Factors affecting RNA quantification from tissue long-term ... Extra-cellular factors affecting liver regeneration in aged rodents It was shown that aging does not affect mouse hepatocytes replicative capacity following exposure to mitogenic agents, such as nuclear receptor ligands (NRL) [ 81 ], able to induce cell proliferation in the absence of tissue injury (direct

hyperplasia). Liver regeneration in aged mice: new insights Aging results in a number of significant changes in the human liver including reductions in liver blood flow, size, drug-metabolizing enzyme content, and pseudocapillarization. Drug metabolism is also influenced by comorbid disease, frailty, concomitant medicines, and (epi)genetics.
