## Futaba S136g User Guide Reviews of Futaba S136G (1) Mark.

November 25, 2015. Rating:

Application(s): Main gear lift for 90 degree Robart retracts on a tricycle set up. Comments: For an analog type servo the 60 ounces of torque is plenty of power. It's moving a 2.5 inch wheel and split doors. Works every time. Gear always locks in place going up or down. Manuals The Futaba S136G is a great retract servo - I've used them many times. Flip the retract switch one way and it runs 180° and locks. Flip retract switch the other way and it rotates 180° in the opposite directions and locks there. This allows the gear to be cycled up and down in flight. Summit 3 help - RC
