[MOBI] Identification Key For Benthic These results suggest that the rbcL gene is a more appropriate genetic marker for identification and classification of benthic diatoms. Considering their high diversity and simple shapes, and thus the difficulty associated with morphological classification of benthic diatoms, a molecular approach could provide a relatively

For the purposes of a visual key, we group diatom shapes into nine artificial (not strictly evolutionary) categories to aid in identification. Why not group by evolutionary relationship? Centric. Category. Centric. Valves with radial symmetry (symmetric about a point) Morphology - Diatoms of North America little was known of the marine benthic habitats. In response to this, Meyer et al. (2000) reported on the status of information pertaining to the conservation values of HIMI region, with specific reference to benthic habitats. They identified several key habitats of outstanding conservation significance, many of which were subsequently benthic
