For the first time, the Inborn Errors of Metabolism Drug Development summit will look to examine how the experience within existing

pharmacology for rare metabolic diseases can be leveraged with the drug development strategies of those pioneering gene modalities to improve efficacy, safety, and commercial viability. Inborn Errors of Metabolism Drug Development Summit 2020 Inborn errors of human natural killer (NK) cells may affect the development of these cells, their function, or both. There are two broad categories of genetic defects of NK-cell development, depending on whether the deficiency is apparently specific to NK cells or clearly affects multiple hematopoietic lineages. Inborn errors of the development of human Natural Killer cells Inborn errors of metabolism can result in injury to virtually any tissue, but the most dramatic and characteristic consequence in untreated or severe cases is damage to the developing brain. Neurological disease often appears clinically as encephalopathy (abnormal brain function and structure). Inborn error of metabolism | genetics | Britannica Inborn errors of metabolism are rare genetic (inherited) disorders in which the body cannot properly turn food into energy. The disorders are usually caused by defects in specific proteins (enzymes) that help break down (metabolize) parts of food. Inborn errors of metabolism: MedlinePlus Medical Encyclopedia Inborn errors of metabolism form a large class of genetic diseases involving congenital disorders of metabolism. The majority are due to defects of single genes that code for enzymes that facilitate conversion of various substances ( substrates) into others ( products ). In most of the disorders, problems arise due to accumulation of substances which are toxic or interfere with normal function, or to the effects of reduced ability to synthesize essential
