Myelin: Biology and Chemistry provides in-depth reviews and discussions regarding recent findings in the biology and chemistry of myelin. Topics are interdisciplinary and carry readers from the cellular level to that of the gene. Myelin - 1st Edition - Russell E. Martenson - Narendra L ... Myelin is a lipid-rich substance that surrounds nerve cell axons to insulate them and increase the rate at which electrical impulses are passed along the axon. The myelinated axon can be likened to an electrical wire with insulating material around it. However, unlike the plastic covering on an electrical wire, myelin does not form a single long sheath over the entire length of the axon. Rather, each myelin sheath insulates the axon over a single long section and, in general, each axon comprises Myelin - Wikipedia Offers reviews and discussions regarding findings in the biology and chemistry of myelin. This book describes research in demyelinating diseases (naturally occurring and experimentally produced) and emphasizes autoimmune and virally induced mechanisms. It is suitable for libraries of molecular biologists, biochemists, and cell biologists. Myelin--biology and chemistry (1992 edition) | Open Library Myelin contains a high content of lipids, and the formation of the myelin sheath requires high levels of fatty acid and lipid synthesis, together with uptake of extracellular fatty acids. Recent studies have further advanced our understanding of the metabolism and functions of myelin fatty acids and lipids. A number of peptides have been synthesized or isolated and used to study the nature of the immunol- ogical response. The significance of myelin basic pro- tein and its degradative fragments age summarised Myelin: Chemistry and Biology Myelin provides insulation for axons and is necessary for saltatory conduction. It is composed of tightly wrapped lipid bilayers with specialized protein constituents. Peripheral nervous system (PNS) myelin is formed by the extension of Schwann cells, and central nervous system (CNS) myelin is produced by oligodendrocytes. Myelin - an overview | ScienceDirect Topics General Introduction. Myelin basic proteins are a group of seven proteins produced from a single gene mapped to chromosome 18q22–q23 by alternate splicing, and found in the central and peripheral nervous system myelin. MBPs are common participants in all myelin sheaths, even in the most primitive vertebrates. Myelin Basic Protein - an overview | ScienceDirect Topics Validated human biology

unambiguously links thyroid hormone to the production of myelin, the protective covering on neurons. Our lead program, ABX-002, engages thyroid hormone receptors selectively in the brain to restore myelin to demyelinated axons to halt and potentially reverse the progressive course of multiple sclerosis and other demyelinating diseases. Our Science - Autobahn Therapeutics To analyze myelin structure and the composition of myelinated tissue in the African lungfish (*Protopterus dolloi*), we used a combination of ultrastructural and biochemical techniques. Electron microscopy showed typical multilamellar myelin: CNS sheaths abutted one another, and PNS sheaths were separated by endoneurial collagen. Myelin structure and composition of myelinated tissue in ... In myelin research, new techniques for tissue staining, microscopy, immunohistochemistry, cell and molecular biology, subcellular fractionation, cell-lineage studies and clonal analysis, genetic analysis, and the production of transgenic and knockout mice were all critical. Myelin Biology and Disorders, Two-Volume Set: Lazzarini ... Myelin, which is elaborated by Schwann cells in the peripheral nervous system (PNS) and by oligodendroglial cells in the central nervous system (CNS), constitutes a high resistance, low capacitance, multi-lamellar spiral wrapping of membranes around the axons of nerve cells, and accounts for the substantial increase in nerve impulse conduction velocity compared to that in non-myelinated nerves. [WorldCat.org] Myelin is composed of about 40% water and the dry mass is composed of about 80% lipids and 20% protein. The mainly lipid composition of the myelin gives it a white hue, hence the reference to the brain's "white matter." The main lipid found in myelin is a glycolipid called galactocerebroside. Myelin - Assignment Point Consisting of 75% lipid and 25% protein, myelin is formed both by oligodendrocytes in the central nervous system (CNS) and by Schwann cells in the peripheral nervous system (PNS). Axon Myelination: Myelination without myelin-associated ... Myelination in the CNS is accompanied by the differentiation of oligodendrocytes as well as the coordinate expression of a group of myelin-specific genes, including those encoding proteolipid protein and myelin basic protein.
