An electric network is any possible interconnection of electric circuit elements, while an electric circuit is a closed energised network. An electric circuit is characterised by currents ( $I$ ) in the elements and voltage ( $V$ ) across them. A network is not necessarily and circuit. network analysis and synthesis explores state-space synthesis as well as analysis, employing modern systems theory to unite classical concepts of network theory. 1973 edition. Passive And Active Network Analysis And Synthesis ... Network analysis starts with a network and by applying the various electric circuit theorems predicts the response of the network. Network synthesis on the other hand, starts with a desired response and its methods produce a network that outputs, or approximates to, that response. analysis and synthesis? In a  
generally accepted definition of  
network analysis and synthesis,  
there are three key words: the  
EXCITATION, the NETWORK, and the  
RESPONSE. Network analysis is  
concerned with determining the  
response, given the excitation and  
the network. In network synthesis,  
the problem is to design the  
network given the excitation and  
the desired response. Network  
Analysis and Synthesis: Kuo,

synthesis is a design technique for  
linear electrical circuits. Synthesis  
starts from a prescribed impedance

The technique is to be compared to network analysis in which the response (or other behaviour) of a given circuit is calculated.
