Cusd80 Notes: Describing Distributions Numerically

When describing distributions, we need to discuss shape, center, and spread. How we measure the center and spread of a distribution depends on its shape. The center of a distribution is a “typical” value. If the shape is unimodal and symmetric, a “typical” value is in the middle. The range of the data is the difference between the maximum and minimum values: $\text{Range} = \text{max} - \text{min}$. A disadvantage of the range is that a single extreme value can make it very large and, thus, not representative of the data overall.
