On The Occurrence Of Phosphorite Phosphorite, phosphate rock or rock phosphate is a non-detrital sedimentary rock that contains high amounts of phosphate minerals. The phosphate content of phosphorite varies greatly, from 4% to 20% phosphorus pentoxide. Marketed phosphate rock is enriched to at least 28%, often more than 30% P₂O₅. This occurs through washing, screening, de-liming, magnetic separation or flotation. By comparison, the average phosphorus content of sedimentary rocks is less than 0.2%. The phosphate is present as

lenses in sediments off the coasts of the Chinese mainland and the Korean Peninsula (Ludwig & Valencia, 1993). The Yellow River delta extends along more than 100 km of the coast, and river sediment can be traced all the way out to the edge of the continental shelf. Phosphorite - an overview | ScienceDirect Topics Sediments composed primarily of carbonate fluorapatite (phosphorite) are formed in highly productive continental margins such as the upwelling regions of the eastern Pacific and the south eastern Atlantic Oceans (Cook et al., 1990). Accordingly, it is speculated that phosphorite could represent a significant sink for seawater phosphate in certain periods of Earth's history (e.g., Föllmi,

1996). Phosphorite - an overview | ScienceDirect Topics A Statement having frequently been made by mineralogical writers, that there exists in the Spanish province of Estremadura an extensive formation of Phosphate of Lime, it was considered by some leading Members of the Royal Agricultural Society of England an object of importance to learn the truth of these statements; and the authors were, therefore, commissioned to ascertain where and under ... On the Occurrence of Phosphorite in Estremadura | Journal ... Phosphorite, also called phosphate rock, rock with a high concentration of phosphates in nodular or compact masses. The phosphates may be derived from a variety of sources, including marine invertebrates

that secrete shells of calcium phosphate, and the bones and excrement of vertebrates. Based on the XRD (D8-FOCUS, BrukerAXS, Karlsruhe, Germany, Cu-K α radiation) analysis, the compositions of the phosphorite ores are apatite (24–26%), dolomite (55–57%), quartz (15–16%), feldspar (3–4%). The high Mg-content of sea water seems to restrict phosphate precipitation at the present time

to diagenetic processes within the sediments. Here, pH has to be relatively low and Eh strongly negative, but the optimal values are unknown. Phosphorites—The Unsolved Problems | Marine Phosphorites ... The phosphorite contains anomalously high levels of Zn (>5000 mg kg⁻¹), Cd (>1.1%), Ag (>20 mg kg⁻¹), Be (>80 mg kg⁻¹) and, to a lesser extent, U. Textural and geochemical evidence indicates that the phosphorite concretions were most likely formed by the replacement of limestone limestone Subject Category: Miscellaneous An occurrence of cadmiferous phosphorite soil concretions ... occurrence of phosphate deposits should aid in prospecting.
