Predicting Products Of Chemical Reactions The potential products in double-replacement reactions are simple to predict; the anions and cations simply exchange.

Remember, however, that one of the products must precipitate, otherwise no chemical reaction has occurred. For the reaction between lead(II) nitrate and potassium iodide, the products are predicted to be lead(II) iodide and potassium nitrate.

5.6: Predicting Products from Chemical Reactions ... RULES FOR PREDICTING PRODUCTS OF CHEMICAL REACTIONS! Here are a few important things to remember when predicting products: !The compounds form must be neutral ionic compounds (which means

However, the idea behind it is the basis for making a large percentage of the chemicals you use every day. And that's not useless. What type of reaction is it? Predicting reaction products | The Cavalcade o' Chemistry This worksheet is designed to help you predict products of simple reactions of the four basic reaction types (synthesis, decomposition, single replacement, and double replacement) and combustion reactions. For the first few reactions, the type of reaction is listed, you should predict the products, then balance. Answers for Predicting Products of Chemical Reactions Look at the reactants of a chemical reaction and predict the products. If you got the correct compounds but in a different order than was the correct answer then
