You're equating two things. An equation, you'll see one expression being equal to another expression. For example, you could say something like  $x + 3 = 1$ . Variables, expressions, & equations (video) | Khan Academy Solving linear equations with one variable Linear equations in one variable are equations where the variable has an exponent of 1, which is typically not shown (it is understood). An example would be something like  $12x = x - 5$ . To solve linear equations, there is one main goal: isolate the variable. Solving

An addition equation with one variable is an addition equation that has one unknown number that you need to solve for. Your equation has an equals sign telling you what is equal to what. With this... Writing & Solving Addition Equations with One Variable ... Perimeter is equal to 2 times the length plus 2 times the width. But they just want us to solve this equation right here, solve for  $l$ . So let's do

that. So we have  $P$  is equal to 2 times  $l$  plus 2 times  $w$ . So we need to solve for  $l$ . So let's isolate all of the  $l$  terms on one side.
